

**Jaypee Institute of Information Technology**  
**Test-2 Examination 2020-21**

**Course Name: Data Structures & Algorithms**

**Course Code: 15B11CI518**

**Max. Time: 1 Hr**

**Max. Marks: 20**

Q.1 [C311.2] [1M] How many number of comparisons are required if interpolation search is applied to search value 20 in following array: 10, 12, 13, 16, 18, 19, 20, 21, 22, 23, 24, 33, 35, 42, 47

**Answer:** 4 comparisons

lo	hi	arr[lo]	arr[hi]	pos	arr[pos]	Comparison
0	14	10	47	3	16	1
4	14	18	47	4	18	2
5	14	19	47	5	19	3
6	14	20	47	6	20	4

Q.2 [C311.1] [1M] Consider the following code fragment and assume no syntax error.

```
do
{
    if(t)
    {
        printf(t-> data);
        do(t -> left);
        printf(t-> data);
        do(t -> right);
    }
}
```

Apply the above snippet on the tree below and identify the output.

**Answer:** A B B D F F D A C E E G G C

Q.3 [C311.1] [1M]

```
int findElement(int A[], int n)
{
    int Element = A[n / 2];
    for (int i = 1 + n / 2; i < n; ++i)
        Element = Element > A[i] ? Element : A[i];
    return Element;
}
```

The above code is run on an array A which is a min heap tree. What will the code do?

**Answer:** Find the maximum element in the min-heap.

Q.4 [C311.1] [1M]

Consider the AVL tree shown below:

Inserting which of the following number(s) will result in single left rotation: 91, 5, 22, 80.

**Answer:** 22

Q.5 [C311.1] [1M] Assume the nodes in a binary tree having no siblings are considered as lonely nodes. If there are a total of  $n$  nodes in an AVL tree, then what can be the maximum number of lonely nodes in this AVL tree?

**Answer:** Less than equal to  $n/2$ .

Q.6 [C311.1] [1M] A B-tree of order 3 has been shown below, perform insertion of 36 in this B Tree.

**Answer:**

Q.7 [C311.1] [1M] Which of the following is/are not a correct inorder traversal sequence(s) of binary search tree(s)?

- I. 2, 4, 6, 7, 14, 18, 24
- II. 4, 7, 8, 11, 9, 16, 24
- III. 1, 6, 9, 7, 13, 15, 19
- IV. 3, 5, 6, 8, 17, 19, 24

**Answer:** II and III

Q.8 [C311.1][1M] Insert the following values in max heap and show the final tree  
8, 20, 17, 40, 45, 30, 38, 60, 70, 81

**Answer:**

Tree insertion one by one

OR

Tree construction and heapify

Q.9 [C311.1][2M] If  $n$  is the number of nodes in a binary tree and  $i$  is initialized as 0. Assuming that every key in a binary tree is unique then fill in the blanks when the above function checks for whether a given binary tree is max heap tree or not. Do not make any new function. Fill only the blanks value.

```
bool check(struct node *root, int i, int n)
{
    if (root == NULL) {
        return true;
    }
    ..... (i)
    if ((root->left && root->left->data > root->data) ||
        (root->right && root->right->data > root->data)) {
        return false;
    }
    .....(ii)
}
```

**Answer:**

First blank:

if ( $i \geq n$ ) { return false; }

Second blank

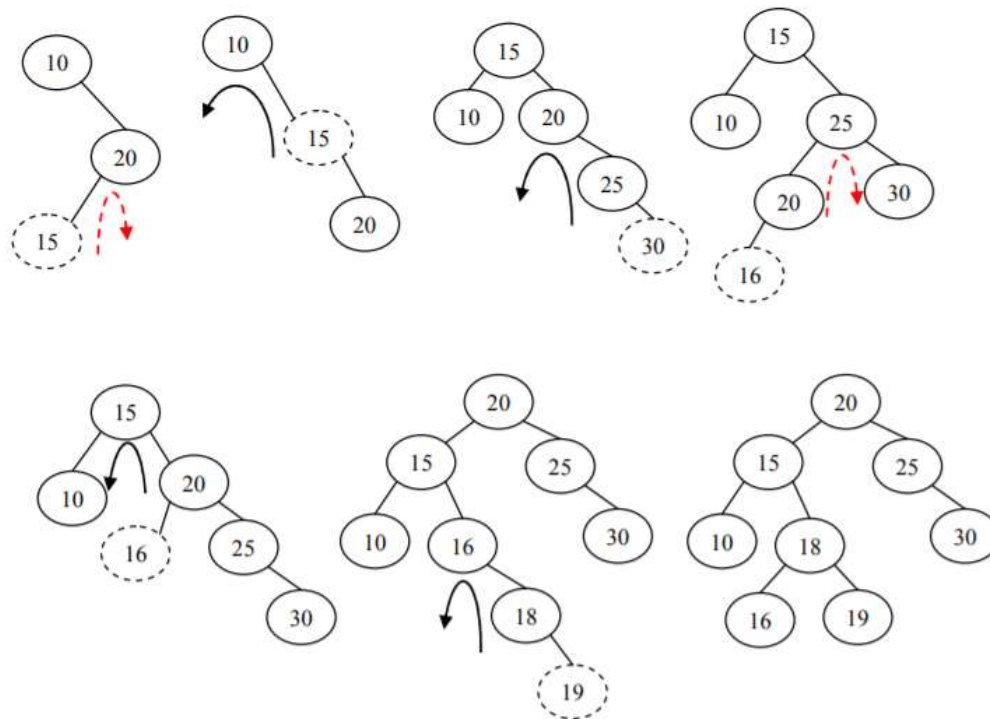

return check(root->left,  $2*i + 1$ , n) && check(root->right,  $2*i + 2$ , n);

Q.10 [C311.1]

- a) [1M] Insert the following sequence of elements into an AVL tree, starting with an empty tree: 10, 20, 15, 25, 30, 16, 18, 19.  
b) [1M] Delete 30 in the AVL tree that is obtained in part (a).

**Answer:**

(a) Red dashed line signifies first part of double rotate action.

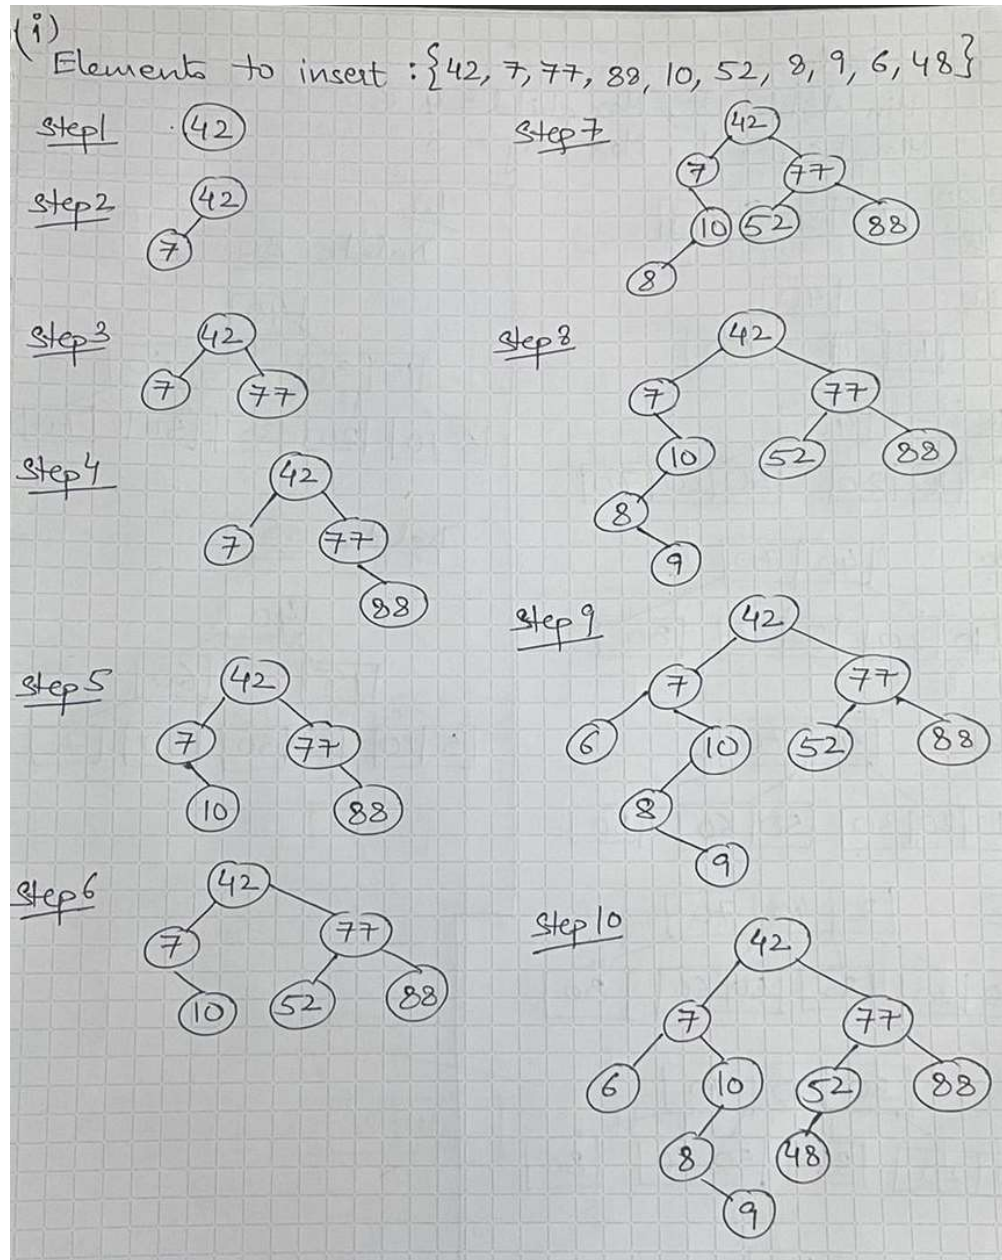

(b).

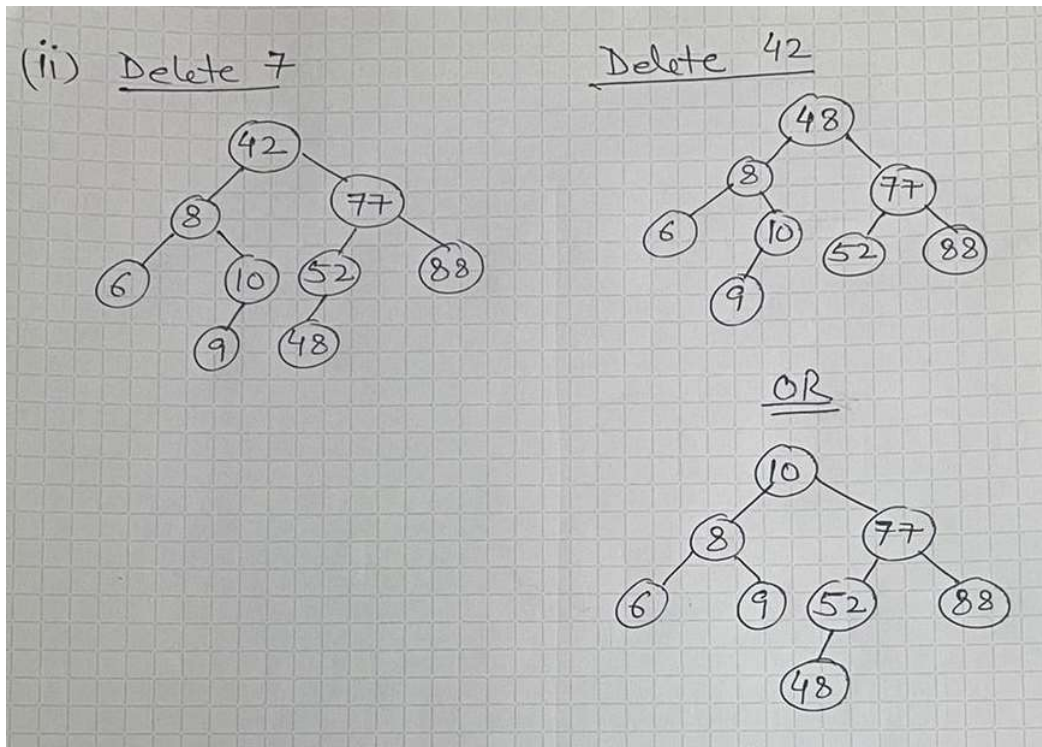

Q.11 [C311.1]

- a) [1M] Draw the BST (Binary Search Tree) that results from inserting the values given below (reading from left to right): 42, 7, 77, 88, 10, 52, 8, 9, 6, 48 (Show all insertion steps one by one).
- b) [1M] Delete 7 and afterwards delete 42. If possible, make sure that the number of nodes in the left and right subtree of the root node are equal. Show BST after each deletion.

**Answer:**

Q.12 [C311.1] Consider the following elements needs to form a B tree of order 4.

10, 20, 40, 50, 60, 70, 80, 30, 35, 5, 15

a) [2M] insert the elements in given order to create a B tree.

b) [1M] Delete the elements 80 followed by 35 from the above constructed tree.

**Answer:**

a) Order = 4

Min child = 2, Max child = 4

Min key = 1, Max key = 3

10 20  
40 [10 | 20 | 40]

50  
[40]  
[10 | 20] [50]

60  
70 [40]  
[10 | 20] [50 | 60 | 70]

80  
[40 | 70]  
[10 | 20] [50 | 60] [80]

30  
[40 | 70]  
[10 | 20 | 30] [50 | 60] [80]

35  
[30 | 40 | 70]  
[10 | 20] [35] [50 | 60] [80]

5  
[30 | 40 | 70]  
[5 | 10 | 20] [35] [50 | 60] [80]

15  
[40]  
[15 | 30] [70]  
[5 | 10] [20] [35] [50 | 60] [80]

b) Delete 80

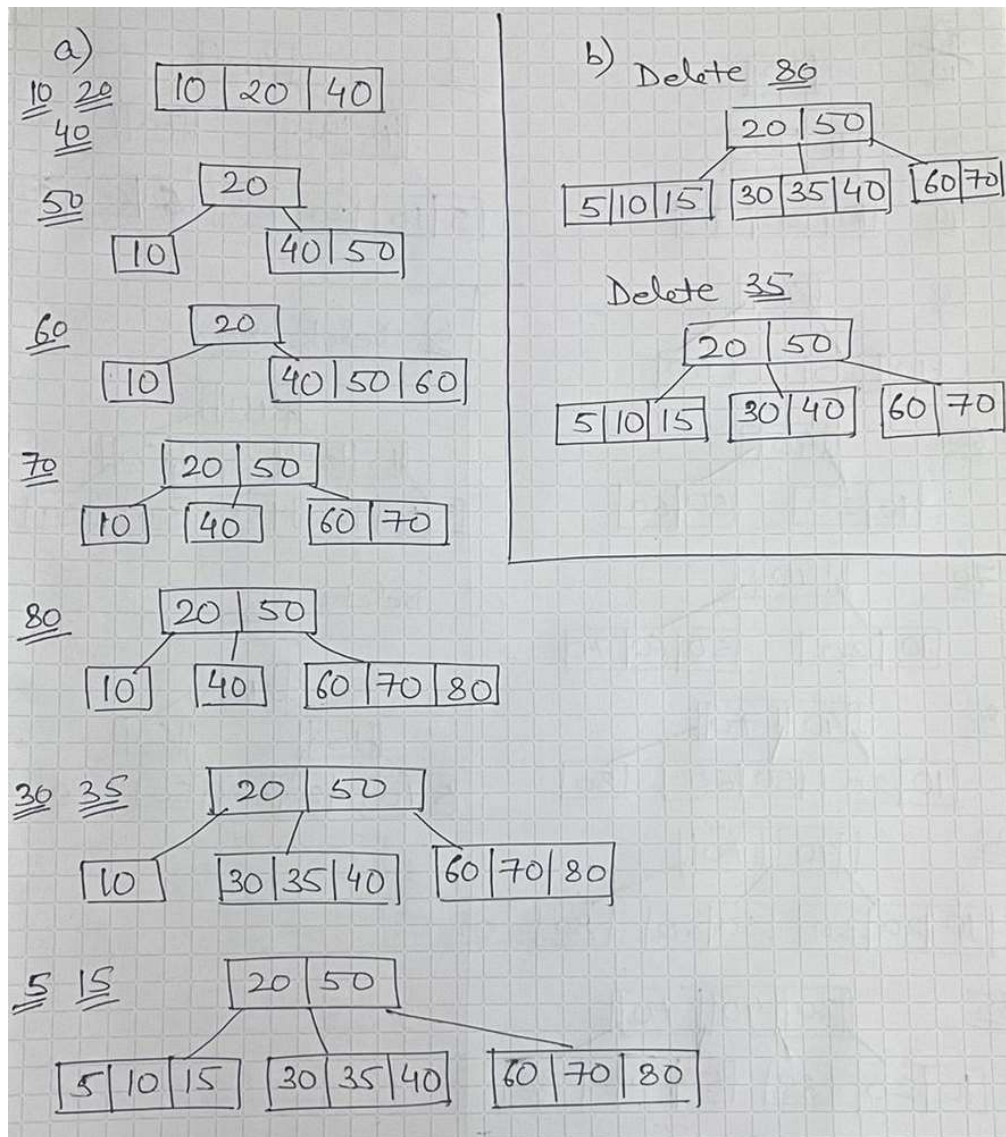

[40]  
[15 | 30] [60]  
[5 | 10] [20] [35] [50] [70]

Delete 35

[40]  
[15] [60]  
[5 | 10] [20 | 30] [50] [70]

OR

Q.13 [C311.3] Consider the following adjacency matrix:

	a	b	c	d	e	f	g
a	0	1	0	1	0	0	0
b	1	0	1	1	1	0	0
c	0	1	0	0	1	1	0
d	1	1	0	0	1	0	1
e	0	1	1	1	0	1	1
f	0	0	1	0	1	0	1
g	0	0	0	1	1	1	0

- I. [1M] Draw the labeled graph for given adjacency matrix.
- II. [1M] Show step by step BFS (Breadth First Search) traversal of obtained graph using suitable data structure. Use vertex "a" as starting vertex.

III. [1M] Show step by step DFS (Depth First Search) traversal obtained graph using suitable data structure. Use vertex “a” as starting vertex.

**Answer:**

I.

Multiple answer possible for BFS and DFS. One of the answer is-

II. *Using queue data structure*

Enqueue: a

a						
---	--	--	--	--	--	--

Dequeue: **a**, Enqueue: b, d

	b	d				
--	---	---	--	--	--	--

Dequeue: **b**, Enqueue: c, e

		d	c	e		
--	--	---	---	---	--	--

Dequeue: **d**, Enqueue: g

			c	e	g	
--	--	--	---	---	---	--

Dequeue: **c**, Enqueue: f

				e	g	f
--	--	--	--	---	---	---

Dequeue: **e**

					g	f
--	--	--	--	--	---	---

Dequeue: **g**

						f
--	--	--	--	--	--	---

Dequeue: **f**

**BFS: a,b,d,c,e,g,f**

III.

*Using stack data structure*

Push a	Pop <b>a</b> Push b,d	Pop <b>d</b> Push e, g	Pop <b>g</b> Push f	Pop <b>f</b> Push c	Pop <b>c</b>	Pop <b>e</b>	Pop <b>b</b>
		g	f	c			
	d	e	e	e	e		
	b	b	b	b	b	b	
a							

**DFS: a,d,g,f,c,e,b**
